

### Tip-Style 38

The tip-style 38 was developed especially for both OSP-contacting as well as Vias with heavy contamination due to solder lacquer deposits. Apart from this it can be used for contacting Ni-Au Pads which have a very thin gold-layer.

The 150° angle of the tip ensures that the gold-layer of the Ni-Au Pads is not penetrated or that a reliable contact is achieved by Vias with solder lacquer desposits.

As in the case of all aggressive INGUN tip-styles we use hardened steel. The tip-style 38 is available in the standard series 050 / 075 / 100.
